Homotaurine: exact normalized model and three-line spectral section
Fixed geminals; d(t)=3.093406t Hz, e(t)=2.344390t Hz; q=0
A Four ordered eigenvalue branches
Normalized energy
Coupling scale t
λ0
λ1
λ2
λ3
B Principal transitions
Frequency / Hz
Coupling scale t
f12
f23
f13
C Solid: bare 3×3; dashed: effective 3×3
Approximation minus exact / Hz
Coupling scale t
D Homotaurine at t = 1; illustrative amplitudes
Normalized absorption
ZQ frequency / Hz
1.9679
2.1854
4.1534
